

AI in Criminal Law

11 April 2025

Ben Douglas-Jones KC has co-authored a timely new book *AI in Criminal Law* (Bloomsbury Professional) with Áine Josephine Tyrell.

At a time when AI is already being integrated into the criminal justice systems of the US and other countries, and legal professionals are considering the accuracy and impact of using AI in their preparatory work, *AI in Criminal Law* provides much-needed insights for legal practitioners.

This succinct volume covers the core questions and issues facing legal practitioners – from an overview of core AI concepts and data protections, to use of AI in preparing skeleton arguments and writing submissions. It also explores the use of AI by criminals in England and Wales and abroad. This is important for practitioners as they need to be aware of how new technology is increasingly facilitating criminal activity, particularly fraud, money laundering, and theft of private information.

Ben and Áine's combined experience provides important insight into AI policy and regulation from the perspective of legal practitioners. This unique book brings those working in criminal and cyber law up to date with how AI has already been, and will continue to be, integrated into different phases of the criminal justice process and will therefore likely impact on their practice.
